

BARRY SAMPATH

Cybersecurity and IT Automation | Identity and Access Management | Security Operations
Brisbane, QLD · 0494 350 950 · barry.sampath@outlook.com · [linkedin.com/in/barrysampath](https://www.linkedin.com/in/barrysampath) · [bharath-blazecode.github.io](https://github.com/bharath-blazecode)

PROFILE

Cybersecurity and IT automation analyst in the penultimate year of a Bachelor of Information Technology (Cybersecurity and Artificial Intelligence) at QUT, completing December 2027. Consults at ScienceGears on Microsoft 365 and Entra ID access controls for a live client, covering Conditional Access, administrator MFA and legacy authentication blocking. Built and runs a Wazuh and Sysmon detection lab, contributed the frontend foundation and an upload security fix to ClassQuest, People's Choice winner at the Code Network Winter Hackathon 2026, and placed 3rd at CIMCTF 2026. Seeking cybersecurity, SOC and identity and access management internships and graduate roles.

TECHNICAL SKILLS

Identity and access management: Microsoft Entra ID, Conditional Access, MFA enforcement, legacy authentication blocking, administrator account separation, emergency access accounts, role-based access, Zero Trust principles

Security operations: Wazuh SIEM, Sysmon (SwiftOnSecurity configuration), endpoint telemetry collection, log analysis, alert triage, detection rule authoring, MITRE ATT&CK technique mapping

Governance, risk and compliance: Access governance review, risk and remediation reporting, security handover documentation, device compliance policy assessment

Automation and development: Python, Power Automate, Power Platform, OpenAI API integration, SharePoint, React, TypeScript, Git and GitHub pull request workflow

Platforms and professional: Microsoft 365, Ubuntu Server, Windows 11, VMware, Raspberry Pi. Client and stakeholder communication, technical documentation for non-technical readers, incident escalation, team coordination

PROFESSIONAL EXPERIENCE

Cybersecurity and IT Automation Analyst | ScienceGears

Apr 2026 - Present

- Configured and reviewed Microsoft 365 and Entra ID account structures, authentication methods and Conditional Access for a live client, including administrator MFA enforcement and legacy authentication blocking.
- Reviewed dedicated administrator and emergency access arrangements against the client's identity posture, then configured and tested shared mailbox access across the tenant.
- Assessed device compliance policies and recorded which remained in report-only mode pending readiness checks, so the client knew which controls were enforced.
- Produced prioritised remediation guidance from the access governance review, turning technical findings into decisions management could act on.
- Wrote the client's security handover report, work completion summary and emergency quick reference guide for staff without a technical background.
- Built an email drafting workflow on Power Automate, the OpenAI API and a SharePoint knowledge base with every draft held for human review, and automated recurring IT tasks in Python validated by the client's operations team.

Power Platform Consulting Program | DynamX Institute

Apr 2026 - May 2026

- Designed and delivered a working Power Platform business system against a simulated client brief, from requirements analysis through solution design to final submission.
- Reworked the architecture across several structured mentor feedback cycles, then presented the design rationale to program assessors as a consulting deliverable.

Customer Service Supervisor | Coles Group

May 2025 - Present

- Supervises a high-volume retail team, training and onboarding more than 20 staff on point-of-sale systems and compliance procedures.
- Acts as the first escalation point for customer disputes, resolving them directly or coordinating with management to hold service standards through peak trading.

PROJECTS

ClassQuest | Code Network Winter Hackathon

Aug 2026

Team People's Choice Award, 15 competing teams

- Formed the team, ran the live demo for the judges and answered in the Q&A. Development and award credit are shared across the team.
- Built the playable learning demo and the frontend foundation, including sign-in, onboarding and server creation and join flows, plus the team's visual system and cohort practice features.
- Patched upload handling to use server-generated storage names and bounded reads, added regression tests for path traversal, absolute paths and file size limits, and documented the security baseline.
- Traced a failing typecheck to an obsolete mode-dependent component and removed it, after which the frontend checks passed.
- Evidence: github.com/MikePineda/class-question, [security PR 12](#) and [integration PR 25](#).

- Stood up Wazuh 4.9.2 on Ubuntu Server with a Windows 11 endpoint running Sysmon in the SwiftOnSecurity configuration under VMware, and confirmed endpoint telemetry collection end to end.
- Worked through VM storage conflicts, network faults and a 50 GB disk filling during the build, then sized storage against expected event volume and retention.
- Published an illustrative detection walkthrough covering an example local rule mapped to MITRE ATT&CK T1059.001 PowerShell, with telemetry, rule and alert labelled as illustrative rather than recorded activity.
- Documented setup and troubleshooting. Attack simulations, production detection rules and alert enrichment are the next phase and are not yet built.
- Repository: github.com/bharath-blazecode/identity-threat-detection-lab

Intelligent Email Automation Platform | ScienceGears

Apr 2026 - Present

- Architected a three-flow Power Automate system integrating the OpenAI API with a SharePoint knowledge base, triaging incoming client email and generating draft replies matched to the client's usual tone, every draft held for human review.
- Designed a two-layer data structure, a structured enquiry log alongside a tagged interaction history library, so the system answers with knowledge of prior correspondence.
- Implemented ingestion of historical email and ongoing customer interaction logging. A comparator that scores drafts against sent replies is designed but not yet built.

LUNA TurboPi Intelligent Robot | Queensland University of Technology

Jul 2025 - Nov 2025

- Built a Raspberry Pi 4B robot with a project partner, combining Python, computer vision, voice control and PID-tuned movement, and debugged the hardware and software interaction under real physical constraints.
- Repository: github.com/bharath-blazecode/luna-turbopi-intelligent-robot

EDUCATION

Bachelor of Information Technology | Queensland University of Technology

Feb 2026 - Dec 2027

Major in Cybersecurity and Artificial Intelligence · GPA 6.091 / 7.000

Diploma of Information Technology | Queensland University of Technology

Feb 2025 - Nov 2025

GPA 6.250 / 7.000

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

Foundations of Cybersecurity | Google

Jul 2025

Introduction to Data Science Job Simulation | Forage and Commonwealth Bank

2025

In progress: CompTIA A+ (Lumify Learn), Harvard CS50P, TryHackMe SOC Level 1 path, Google Cybersecurity Certificate

LEADERSHIP AND COMMUNITY

Event Officer, elected Engagement Officer | Code Network, QUT

Mar 2026 - Present

- Elected Engagement Officer at the September 2026 annual general meeting after six months as Event Officer, with the new term beginning October 2026.
- Coordinates venue bookings, scheduling and participant logistics for university technology events of up to 40 people, working across organisers, volunteers and attendees.

CTF Events Volunteer | Cyber in Motion

Apr 2026 - Present

- Plans and sets up capture-the-flag events, prepares briefing material and guides participants on the day.
- Placed 3rd at CIMCTF 2026 with team SushiShield, across the identity, web exploitation and OSINT categories.

Events and Student Engagement Volunteer | QUT Guild

Aug 2025 - Nov 2025

- Ran logistics, participant engagement and communications for campus events.
