PROFILE

Cybersecurity and IT automation analyst with client-facing experience in Microsoft 365, Entra ID access controls, Power Automate and Python. Current work at ScienceGears covers identity-control reviews and automation for a live client. Projects span Wazuh and Sysmon endpoint telemetry, secure upload handling for the People's Choice-winning ClassQuest team, frontend development and technical documentation. Completing a QUT Bachelor of Information Technology in Cybersecurity and Artificial Intelligence in December 2027; seeking cybersecurity, SOC and identity and access management internship or graduate opportunities.

TECHNICAL SKILLS

Identity and access management: Microsoft Entra ID, Conditional Access, MFA enforcement, legacy authentication blocking, administrator account separation, emergency access accounts, role-based access, Zero Trust principles

Security operations: Wazuh SIEM, Sysmon with the SwiftOnSecurity configuration, endpoint telemetry collection, log review, illustrative detection analysis and MITRE ATT&CK technique mapping

Governance, risk and compliance: Access governance reviews, risk and remediation reporting, security handover documentation and device compliance policy assessment

Automation and development: Python, C#, SQL, Power Automate, Power Platform, OpenAI API integration, SharePoint, React, TypeScript, Git and GitHub pull request workflows

Platforms and professional: Microsoft 365, Ubuntu Server, Windows 11, VMware, Raspberry Pi. Client and stakeholder communication, technical documentation for non-technical readers, incident escalation, team coordination

PROFESSIONAL EXPERIENCE

Cybersecurity and IT Automation Analyst | ScienceGears *Apr 2026 - Present*

- Configured and reviewed Microsoft 365 and Entra ID account structures, authentication methods and Conditional Access for a live client, including administrator MFA enforcement and legacy authentication blocking.
- Reviewed dedicated administrator and emergency access arrangements against the client's identity posture, then configured and tested shared mailbox access across the tenant.
- Assessed device compliance policies and documented which controls remained in report-only mode pending readiness checks.
- Produced prioritised remediation guidance from the access governance review and presented the findings in plain language for management.
- Wrote the client's security handover report, work completion summary and emergency quick reference guide for non-technical staff.
- Built an email drafting workflow with Power Automate, the OpenAI API and a SharePoint knowledge base, with every draft held for human review. Also automated recurring IT tasks in Python and validated them with the client's operations team.

Power Platform Consulting Program | DynamX Institute *Apr 2026 - May 2026*

- Designed and delivered a working Power Platform business system from a simulated client brief, covering requirements analysis, solution design and final submission.
- Reworked the architecture through several rounds of mentor feedback, then presented the design rationale to program assessors.

Customer Service Supervisor | Coles Group *May 2025 - Present*

- Supervise a high-volume retail team, training and onboarding about 20 staff on point-of-sale systems and compliance procedures.
- Act as the first escalation point for customer disputes, resolving issues directly or coordinating with management while maintaining service standards during peak trading.

PROJECTS

ClassQuest | Code Network Winter Hackathon *Aug 2026*

Team People's Choice Award at Code Network's Winter Hackathon 2026 (15 teams)

- Formed the team, ran the live demonstration for the judges and answered questions during the Q&A. The build and award were shared across the five-person team.
- Built the playable learning demo and frontend foundation, covering sign-in, onboarding, server creation and join flows. Also contributed the visual system and cohort practice features.
- Changed upload handling to use server-generated storage names and bounded reads. Added regression tests for path traversal, absolute paths and file-size limits, and documented the security baseline.
- Traced a failed type check to an obsolete mode-dependent component, removed it and restored passing frontend checks.
- Evidence: github.com/MikePineda/class-quest, security PR 12 and integration PR 25.

HomeLab ITDR: Identity threat detection and response lab | Personal project *Jun 2026 - Present*

Phase 1 infrastructure complete. Development paused.

- Deployed Wazuh 4.9.2 on Ubuntu Server with a Windows 11 endpoint running Sysmon in the SwiftOnSecurity configuration under VMware, then confirmed endpoint telemetry reached Wazuh.
- Resolved VM storage conflicts, network faults and a full 50 GB disk during the build, then resized storage for the expected event volume and retention period.
- Published an illustrative detection walkthrough using a local rule mapped to MITRE ATT&CK T1059.001 (PowerShell). The telemetry, rule and alert are labelled as examples rather than recorded activity.
- Documented the build and troubleshooting steps. Attack simulations, production detection rules and alert enrichment remain planned work.
- Repository: github.com/bharath-blazecode/identity-threat-detection-lab

Intelligent Email Automation Platform | ScienceGears *Apr 2026 - Present*

- Designed a three-flow Power Automate architecture using the OpenAI API and a SharePoint knowledge base. Built the live flow that triages incoming email and prepares draft replies from approved context, with every draft held for human review.
- Designed two data layers: a structured enquiry log and a tagged interaction-history library, so the system can use recorded customer history when drafting.
- Implemented automated lead logging and customer-history lookup for incoming email, and imported about 2,400 past sent replies so drafts can draw on similar enquiries. The draft comparison tool is not yet built.

LUNA TurboPi Intelligent Robot | Queensland University of Technology *Jul 2025 - Nov 2025*

- Built a Raspberry Pi 4B robot with a project partner, combining Python, computer vision, voice control and PID-tuned movement. Debugged hardware and software faults on the physical robot.
- Repository: github.com/bharath-blazecode/luna-turbopi-intelligent-robot

EDUCATION

Bachelor of Information Technology | Queensland University of Technology *Feb 2026 - Dec 2027*

Major in Cybersecurity and Artificial Intelligence · GPA 6.09 / 7.00

Diploma of Information Technology | Queensland University of Technology *Feb 2025 - Nov 2025*

GPA 6.25 / 7.00

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

Foundations of Cybersecurity | Google *Jul 2025*

Introduction to Data Science Job Simulation | Commonwealth Bank and Forage *Nov 2025*

Databricks Fundamentals | Databricks *Oct 2026*

In progress: CompTIA A+ (Lumify Learn), Microsoft SC-900, TryHackMe SOC Level 1

LEADERSHIP AND COMMUNITY

Technical Lead | QUT The Emerging Coders Hub (TECH) *Oct 2026 - Present*

- Coordinate two Technical Officers as a member of the executive team, planning practical project nights and technical event preparation alongside the Events team.
- Contribute to hands-on project development, investigate technical issues and work with the team to resolve implementation problems.
- Explain project technologies and technical concepts to support team understanding and help members build practical skills.

Engagement Officer | Code Network, QUT *Sep 2026 - Present*

- Support the Engagement Coordinator in welcoming members, encouraging participation and helping attendees connect during club activities.
- Contribute to engagement activities and ideas that encourage member involvement and help maintain an inclusive club community.

Event Officer | Code Network, QUT *Mar 2026 - Sep 2026*

- As Event Officer, coordinated venue bookings, schedules and participant logistics for university technology events of up to 40 people, working with organisers, volunteers and attendees.

CTF Events Volunteer | Cyber in Motion *Apr 2026 - Present*

- Plan and set up capture-the-flag events, prepare briefing material and guide participants on the day.
- Placed 3rd overall at CIMCTF 2026 (March) with Team SushiShield, focusing on cryptography and OSINT challenges.

Member | Australian Information Security Association (AISA), Brisbane

Events and Student Engagement Volunteer | QUT Guild *Aug 2025 - Nov 2025*

- Ran logistics, participant engagement and communications for campus events.
